

Principles of Probability and Statistics
Edited by James F. Nicosia and Jake D. Nicosia

Table of Contents

Introduction

Section 1: Mathematical Foundations of Probability and Statistics

Introduction

Bayes' Theorem

Binomial Theorem

Bivariate Data

Central Limit Theorem

Chebyshev's inequality

Combinations

Combinatorics

Confidence Intervals

Continuous Random Variable

Correlation Modeling

Correlational Research

Correlations and Causations

Density

Descriptive Statistics

Discrete mathematics

Distributions

Empirical Formula

Expected Values

Exponentials and Logarithms

Function Rate of Change

Functions

Graphs

Histograms

Infinity: Mathematics

Law of large numbers

Limits and Continuity

Linear and Nonlinear Relationships

Linear Concepts

Mathematical Modeling

Matrices

Normal and Binomial Distributions

Normal Distribution

Number and Operations

One-Tailed and Two-Tailed t-tests
Permutations and Combinations
Permutations and Computations
Poisson Distribution
Polynomials
Probability
Probability and Statistics
Proofs
Randomization
Randomness
Regression Modeling and Analysis
Regression Point Displacement
Scatterplots
Significance Levels
Standard Deviation
Statistics Education
Transformations
Zero

Section 2: Research Applications of Probability and Statistics

Introduction

Abductive Reasoning
ANCOVA
ANOVA
BACI
Case Study Research
Causal Networks
Chi-Square Goodness of Fit Test
Chi-Square Test of Independence
Chi-squared Distribution
Cluster Sampling
Comparative Research
Completely Randomized Designs
Cross-Sectional Sampling
Crossover Repeated Measures Design
Data Collection
Deductive Reasoning
Descriptive Research
Experimental Research
Explanatory Research
Exploratory Research
External Validity
Field Experiment

Fractional Factorial Designs
Full Factorial Design
Holistic Study: Ethnography
Hypothesis Testing
Hypothesis-Based Study
Hypothesis
Independent Variable Manipulation
Inductive Reasoning
Inferential Statistics
Interdisciplinary Mathematics Research
Internal Validity: Causality
Interpretive Methods
Kruskal-Wallis Test
Laboratory Experiment
Latin Square Designs
Longitudinal Sampling
Mann-Whitney U-Test
Mills Methods of Causal Reasoning
Multiple Case Study
Multistage Sampling
Nested Analysis of Variance
Nested Designs
Nonprobabilistic Sampling
Nonequivalent Dependent Variables Design
Nonresponse Error
Objectivity
Placebo Effect
Plackett-Burman Design
Positivist Methods
Posttest-Only Design
Pretest-Posttest Experimental Research Design
Probabilistic Sampling
Prospective Cohort Design
Quadrat Sampling
Qualitative Research
Quantitative Research
Random Sampling Error
Randomized Complete Block Designs
Regression Discontinuity Design
Replication Manipulation and Randomization
Retrospective Cohort Design
Sample Frame Error
Sample Surveys
Sampling Design: Randomness and Interspersion

Sampling Design vs. Experimental Design
Sampling Framework
Sampling vs Census
Solomon Four-Group Design
Split-Plot Type Designs
Statistical Inference
Stratified Random Sampling-Randomized Block Design
Student's t-Test
Switching Replications Design
Systematic Sampling
Time-Series Designs
Type I and Type II Errors

Section 3: Real-World Applications of Probability and Statistics

Introduction

Betting and Fairness
Birthday Problem
Business Finance
Census
Climate Models and Modeling
Climate Prediction and Projection
Computational Methods for Economics
Data Analysis and Probability in Society
Data Science
Dice Games
Disease Survival Rates
Elections
Forecasting
Game Theory
Genetics and Mathematics
Infectious Diseases, Tracking
Insurance and Mathematics
Interest Rates
Investment Concepts
Market Research and Mathematics
Mathematical Puzzles
Mathematics, Applied
Mathematics, Theoretical
Mathematics in Economics
Mathematics Software
Medical Diagnosis
Numbers and Operations in Society
Observational data of the atmosphere and oceans

Predicting Preferences
Predictive Mathematical Models
Spam Filters
Stock Market Indices
Trading and Markets
Voting Methods
Weather Forecasting: Numerical Weather Prediction
Weather vs. Climate

Glossary

Index
