

CONTENTS

Publisher's Note	ix	Earth's Moon	129
Introduction	xi	Economic Geology	130
Contributors	xv	Engineering Seismology	137
Andesitic Rocks	1	Evaporites	142
Aquifers	4	External Processes	145
Asteroids	7	Extraterrestrial Resources	147
Athabasca Oil Sands	10	Floods	153
Basaltic Rocks	15	Fluvial and Karst Processes	157
Batholiths	19	The Gaia Hypothesis	163
Beaches and Coastal Processes	24	Gem Minerals	165
Biogenic Sedimentary Rocks	28	Geochemical Cycles	170
Bolides	33	Geologic Timescale	172
Boltwood Uses Radioactivity to Determine		Geology	175
Ages of Rocks	35	German <i>Meteor</i> Expedition Discovers the	
Carbonate Compensation Depths	39	Mid-Atlantic Ridge	178
Carbonate Minerals	43	Glaciations	181
Carbonatites	46	Glaciers	183
Clays	50	Gondwanaland and Laurasia	187
Clays and Clay Minerals	53	Granitic Rocks	190
Contact Metamorphism	57	Gutenberg Discovers Earth's Mantle-Outer	
Coriolis Effect	61	Core Boundary	195
Crystals	64	Heezen and Ewing Discover the	
The "Deep-Impact" Mission: Geology of		Midoceanic Ridge	199
a Comet	69	Hess, Harry Hammond	202
Deep-Sea Sedimentation	72	Hess Identifies the Cause of Continental Drift	204
Deglaciation	76	Hutton Proposes the Geological Theory of	
Deltas	78	Uniformitarianism	208
Desert Landforms	82	Igneous Processes, Rocks, and Mineral	
Desert Pavement	85	Deposits	213
Desertification	90	Internal Geologic Processes	217
Deserts	93	International System of Units	220
Diagenesis	97	Kimberlites	227
Diamond	101	Lehmann Discovers Earth's Inner Core	233
Diatomite	104	Limestone	235
Doell and Dalrymple Discover the Magnetic		Lithosphere	236
Reversals of Earth's Poles	107	Lomonosov Issues the First Catalog of	
Drainage Basins	110	Minerals	238
Earthquake Prediction	115	Lunar Exploration	241
Earthquakes	120	Magma Crystallization	247
Earth's Crust	123	Marble	249
Earth's Internal Structure	126	Mars Exploration Rovers	251
		Mean Sea Level	255

Metamictization	258	Riverbed Forms	382
Metamorphic Processes, Rocks, and Mineral Deposits	260	Salt Domes	387
Mineralization and Hydrothermal Solutions	264	Sand and Gravel	388
Mineralogy	269	Sandstone	391
Mohs Hardness Scale	275	Seafloor Spreading	393
Mountain Building	276	Secondary Enrichment of Mineral Deposits	394
Nesosilicates and Sorosilicates	281	Sedimentary Processes, Rocks, and Mineral Deposits	396
New Horizons Pluto-Kuiper Belt Mission	285	Shale	400
Nonsilicates	288	Silicates	402
Nucleosynthesis	292	Siliciclastic Rocks	403
Ocean Acidification	297	Slate	409
Ocean Margins	299	Soils	410
Oceans' Origin	301	Steno Presents His Theories of Fossils and Dynamic Geology	416
Oil Shale and Tar Sands	305	Streams and Rivers	418
Oldham and Mohorovičić Discover Earth's Interior Structure	309	Structure and Physical Properties of Minerals	424
Ophiolites	311	Subduction and Orogeny	430
Orbicular Rocks	313	Sub-Seafloor Metamorphism	435
Paleontology	319	Teilhard de Chardin, Pierre	439
Physical Properties of Rocks	325	Turbidity Currents and Submarine Fans	444
Placer Deposits	330	Ultrahigh-Pressure Metamorphism	449
Planet Formation	333	Ultrapotassic Rocks	452
Planetary Exploration	339	Volcanoes	457
Planetary Interiors	345	Weathering	461
Plate Tectonics	351	Wegener, Alfred	464
Plutonic Rocks and Mineral Deposits	354	Wegener Proposes the Theory of Continental Drift	468
Pumice	356	Xenoliths	473
Pyroclastic Flows	358	Zeolites	479
Quartz and Silica	363	Bibliography	483
Reefs	367	Glossary	510
Regional Metamorphism	371	Organizations	525
Richter, Charles Francis	376	Subject Index	527
Richter Develops a Scale for Measuring Earthquake Strength	379
